Melanin, melanogenic, oligomer, cytostatic, anti-allergic, p53; anti-inflammatory; dermatological, ophthalmological, anti-psoriatic; immunosuppressive, DNA repair; proliferation inhibitor; apoptosis; tumour necrosis factor inhibitor; photoaging; hyperproliferative disease; carcinoma, oxidative stress; skin cancer; allergy mediated inflammation; conjunctivitis; allergic rhinitis; vitiligo; ss.
                                                                                                                                                       AAZ10692-97 represent DNA fragments that are used for increasing p53 activity in a cell. The oligonucleotides are are UV mimetics and protect cells against subsequent exposure to UV-irradiation or chemicals. The oligonucleotides are useful for increasing p53 activity in a cell, reducing the susceptibility to UV-induced hyperproliferative disasses, treating psoriasis, vitiligo, atopic dermatitis, allergic rhintis, conjunctivitis, and UV-induced dermatoses, reducing photoaging and reducing susceptibility to skin cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Inhibiting proliferation of epithelial cells, useful e.g. for treating carcinoma, using specific oligonucleotides that mimic the effects of ultra-violet light
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes inhibition of mammalian epithelial cell proliferation by treating cells with at least one oligonucleotide, its fragment. The compounds, which have cytostatic, anti-allergic,

anti-inflammatory, dermatological, ophthalmological, anti-psoriatic and immunosuppressive activities, function as 'ultra-violet mimics' to induce that processes (or a protective response to later exposure to radiation or chemicals), as a proliferation inhibitor, apoptosis inducer or a tumour necrosis factor inhibitor. Probably they mimic products of the processed UNA-damage intermediates, by inducing the p53 pathway, resulting in transient arrest of cell growth, allowing more time for DNA repair to occur before cell division takes place. The method is especially used to treat cartinoma but may also be used to: treat onther hyperproliferative states (e.g. psoriasis or precancerous conditions); reduce photoaging, oxidative stress or damage; prevent skin cancer; treat allergically mediated inflammation (atopic or contact dermatitis, allergically mediated inflammation); prevent or reduce DNA damage in cells caused by radiation or chemicals; increase melanin production promote apoptosis in epithelial cells (e.g. for treating vitiligo), and to promote apoptosis in epithelial cells (e.g. for treating vitiligo), and to promote apoptosis in response to DNA damage, in epithelial cells (e.g. for treating vitiligo), and to oligonucleotides that contain non-hydrolyzable backbones are used to inhibit apoptosis, in response to DNA damage, in epithelial cells that contain damaged of the oligonucleotides used to inhibit mammalian epithelial cell the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The invention relates to selecting genetically modified cells comprising:

(a) modifying cells containing a growth essential gene X, with a vector containing gene Y; and (b) treating the modified cells with an antisense or antigene construct directed against the essential gene X of the cells or antigene construct directed against the essential gene X of the cells to obtain preferential growth of the modified cells over other nonmodified cells. Also included is a product manufactured fully or partially by use of the new method. The method is useful for selecting genetically modified cells and manufacturing a product. It is useful for cresearch the isolation and industrial growth maintenance of transformed organisms. The new method has the advantage of selecting and maintaining a plasmid containing bacterial culture without the use of antibiotics. This has a wide variety of applications in research, development, and industrial production involving genetically modified micro-organisms. The method inhibits bacterial infections in eukaryotic cell cultures.

The present sequence is an antisense oligonucleotide (incorporated into a peptide nucleic acid (PPAA) melecule) which targets the E. coli acpp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note= "C is covalently linked to the peptide appearing as ABG73942 via a polyethylene glycol moiety"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                    The invention comprises peptide nucleic acid (PNA) oligomers, where the single units of the oligomers comprise different amino acid backbones belected from any amino acid, such as: including aminochylylyine (aeg); aminochylpyrrolidine (pyr). The PNA oligomers of the invention are useful for the downregulation of specific genes by targeting the genes at the mRNA or DNA level. The PNA oligomers are useful for treating bacterial and viral infections, cancer, metabolic diseases and immunological disorders. The PNA oligomers are also useful in PCR monitoring/modulation by PNA-clamping. The present DNA sequence represents a PNA oligomer of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Selecting genetically modified cells useful for isolation and industrial growth of transformed organisms comprises treating the modified cells with an antisense or antigene construct directed against the essential gene X of the cells

New peptide nucleic acid oligome:
    treat bacterial and viral infect:
    Treat invention comprises peptide is ingle units of the oligomers of commonethylprolyl (acp); and aminoethylprolyl (acp); and immunological disorcent in PCR monitoring/modulation by increases and immunological disorcent in PCR monitoring/modulation by increases and immunological disorcent increases and increa

This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, ardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                              The invention relates to selecting genetically modified cells comprising:

(a) modifying cells containing a growth essential gene X, with a vector containing gene Y; and (b) treating the modified cells with an antisense or antigene construct directed against the essential gene X of the cells not obtain preferential growth of the modified cells over other nonpartially by use of the new method. The method is useful for selecting genetically modified cells and manufacturing a product. It is useful for research the isolation and industrial growth maintenance of transformed organisms. The new method has the advantage of selecting and maintaining a plasmid containing bacterial culture without the use of antibiotics. This has a wide variety of applications in research development, and industrial production involving genetically modified micro-organisms. The method inhibits bacterial infections in eukaryotic cell cultures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is an antisense oligonuclectide (incorporated into a peptide nucleic acid (PNA) molecule) which targets the E. coli acpP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SNP; single nucleotide polymorphism; human; diagnosis; PNA; cancer; CNS; peptide nucleic acid; cytosine methylation; cardiovascular; primer; ss; central nervous system; gastrointestinal; respiratory; immune; metabolic.

Selecting genetically modification of trans industrial growth of trans modified cells with an ant PT the essential growth of trans modified cells with an ant PT the essential grow XX

Claim 29; Fig 1; 92pp; Eng XX

Claim 29; Fig 1; 92pp; Eng XX

Containing gene Y; and (b) or antigene construct direct containing gene Y; and (containing gene Y; and (b) or antigene construct direct to obtain preferential grow modified cells organisms. The new method in genetically modified cells organisms. The new method in genetically modified cells organisms. The new method in genetical production involuence in the present sequence is an epetide nucleic acid (PNA) gene (gene X in this exampled onerty Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC00010-ABC99989, ABF00010-ABH99989 and ABI00010-ABR99017 represent the oligomers described in the invention. NOTE: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format from WIPO at
ABI00010-ABI82073 represent the oligomers described in the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at

This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic (SNP) oligomucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC0010-ABIS2073 represent the oligomers described in the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at
                                                                                                                                                                                                                                     SNP; single nucleotide polymorphism; human; diagnosis; PNA; cancer; CNS; peptide nucleic acid; cytosine methylation; cardiovascular; primer; ss; central nervous system; gastrointestinal; respiratory; immune; metabolic.
                                                                                                                                                                             Oligonucleotide primer SEQ ID NO 321106 for detecting SNP TSC0030074.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Oligonucleotide primer SEQ ID NO 326072 for detecting SNP TSC0032886.

This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC10010-ABIS2973 represent the oligomers described in the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Peptide nucleic acid; PNA; bacterial infection; 23S ribosomal RNA; rRNA;

This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC00010-ABI082073 represent the oligomers described in the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at fip.wipo.int/pub/published_pct_sequences.
SNP; single nucleotide polymorphism; human; diagnosis; PNA; cancer; CNS; peptide nucleic acid; cytosine methylation; cardiovascular; primer; ss; central nervous system; gastrointestinal; respiratory; immune; metabolic.

used to combat diseases, especially bacterial infections, by targeting molecules such as 23S ribosomal RNA and inhibiting translation. They are molecules such as 23S ribosomal RNA and inhibiting translation. They are useful in the manufacture of a medicament for the treatment of a diseases e.g. bacterial and viral infections, cardiac or vascular diseases.

E. g. bacterial and viral infections cardiac or vascular diseases.

E. g. bacterial and viral infections or inborn errors of metabolism) and immunological disorders. The microorganisms that can be inhibited include Gram-positive organisms (e.g. Streptococcus, Staphylococcus, Peptococcus, Bacillus, Listeria, Clostridium, Propionebacteria, Gram-negative calmonalla, Shigella, Proteus, Pseudomonas, Vibrio, Legionella, Branhamella and organisms which stain poorly with Gram's stain (e.g. Mycobacteria, and organisms which stain poorly with Gram's stain (e.g. Mycobacteria, Coxiella). The PNA molecule enables specific and efficient inhibition of bacterial genes with nanomolar concentrations and enhances antiinfective effect with different orientation of the modified PNA molecule, #8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The invention discloses peptide nucleic acid (PNA) monomers which can be used to combat diseases, especially bacterial infections, by targeting used to combat diseases, especially bacterial infections, by targeting colecules such as 23% ribosomal RNA and inhibiting translation. They are useful in the manufacture of a medicament for the treatment of a diseases e.g. bacterial and viral infections, cardiac or vascular diseases.

C. G. Bacterial and viral infections, cardiac or vascular diseases.

C. Gram-positive organisms (e.g. diabetes or inhorn errors of metabolism) and immunological disorders. The microorganisms that can be inhibited include Gram-positive organisms (e.g. Streptococcus, Staphylococcus, Peptococcus, Bacillus, insterial, Clostridum, Propionebacterial, Gram-negative bacterial, Glostridum, Propionebacterial, Gram-negative Calmonella, Shigella, Proteus, Pseudomonas, Vibrio, Legionella, Salmonella, Bortella, Campylobacter, Neisseria, Branhamella) and organisms which stain poorly with Gram's stain (e.g. Mycobacteria, The PNA molecule enables specific and efficient inhibition of bacterial genes with nanomolar concentrations and enhances antiinfective effect with different orientation of the peptide in relation to the Nanomolar and officed plan molecule, #8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

used to combat diseases, especially bacterial infections, by trageting molecules such as 23S ribosomal RNA and inhibiting translation. They are useful in the manufacture of a medicament for the treatment of a diseases e.g. bacterial and viral infections, cardiac or vascular diseases, e.g. bacterial and viral infections, cardiac or vascular diseases (e.g. diabetes or inborn errors of metabolism) and immunological disoaces. The microorganisms that can be inhibited include Gram-positive organisms (e.g. Streptococcus, Staphylococcus, Peptococcus, Bacillus, Listeria, Clostridium, Propionebacteria), Gram-negative bacteria (e.g. Bacteroides, Probacterium, Sacherichia, Klabsiella, Bacillus, Brocella, Ruccella, Campylobacter, Neisseria, Branhamella) and organisms which stain poorly with Gram's stain (e.g. Mycobacteria, Treponema, Leptospira, Borrela, Mycoplasma, Clamydia, Rickettsia, Treponema, Leptospira, Borrela, Mycoplasma, Clamydia, Rickettsia, Coxiella). The PNA molecule enables specific and efficient inhibition of bacterial genes with nanowolar concentrations and enhances antinfective effect with different orientation of the peptide in relation to the NAM, sequence. The sequence of the persented is the modified PNA molecule, #8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "This sequence is a peptide nucleic acid, (i.e. it contains a polyamide backbone instead of a deoxyribose backbone"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /*tag= b

The invention comprises peptide nucleic acid (PNA) oligomers, where the single units of the oligomers comprise different amino acid backbones selected from any amino acid, such as: including aminoethylglycine (aeg); and aminoethylpyrzolidine (pyr). The PNA oligomers of the invention are useful for the downregulation of specific genes by targeting the genes at the mRNA or DNA level. The PNA oligomers are useful for treating bacterial and viral infections, cancer, metabolic diseases and immunological disorders. The PNA oligomers are also useful in PCR monitoring/modulation by PNA-clamping. The present DNA sequence represents a PNA oligomer of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                              New peptide nucleic acid oligomer, useful as antisense molecules to treat bacterial and viral infections, has single units comprising different amino acid backbones such as aminoethylglycine -

                                                                                                                          was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwDA2 (gil 4732114|gb|AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli Xiii0-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota, Viridiplancae, Streptophyta, Embryophyta, Tracheophyta, Spermatophyta, Viridiplancae, Streptophyta, Embryophyta, Tracheophyta, Spermatophyta, Magnollophyta, eudicotyledons, core eudicots, rosids; eurosids II, Brassicales, Brassicaceae, Arabidopsis.

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gi|4732114|gb|AP129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AZ605844 25 bp DNA linear GSS 13-DEC-2000 1M0427J22F Mouse 10kb plasmid UUGCIM library Mus musculus genomic clone UUGCIM0427J22 F, genomic survey sequence.

Zuechtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany This sequence is recovered from the left border of the T-DNA. It indicates an insertion within the locus defined by clone F9L1. The sequences are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project. GABI-Kat is part of the German
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Arabidopsis thaliana

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   COMMENT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gij4732114 [gb]AR123072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent B. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

/clone="ibx-abidopsis thaliana T-DNA insertion lines"
/clone="ibx-abidopsis thaliana T-DNA from Arabidopsis thaliana plants (T1) which were transformed with the T-DNA from vector PACISI. The lines contain one or more T-DNA insertions. The DNA fragment(s) resulting from the PCR were directly sequenced to determine the genomic sequence flanking the insertion. Sequences displaying significant similarity to the A. thalaina nuclear genome sequence were processed for submission. T-DNA derived sequences were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      BG926068 17 bp mRNA linear EST 06-NOV-2001

```
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of publy (gilfallalghAll29072.1), a copy number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to edemically-competent E. coli X110-Gold (Stratagene) cells and selected for ampicillin resistance."

The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gi|q/32.114|gb|AR12.3072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent B. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymcleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil 4732114 [gb]AR129072.1), a copy.number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli Xii0-Gold (Stratagene) cells and selected for ampicillin resistance."

```
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gal electrophoresis. Vector DNA was prepared from a derivative of pWAP2 (gil 4732114 |gb|AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli Xil0-Gold (Stratagene) cells and selected for ampicillin resistance."

The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gal electrophoresis. Vector DNA was prepared from a derivative of pWAPA2 (gil #732114 [gb] AF125072.1), a copy number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chamically-competent E. coli Xil0-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Contact: Robert B. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 6551,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 16,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
